MEMORANDUM FOR: Assistant Director for Scientific Intelligence

FROM: F. C. Durant

SUBJECT: Report of Meetings of the Office of Scientific
Intelligence Scientific Advisory Panel on
Unidentified Flying Objects, January 14 - 18, 1953PURPOSE

The purpose of this memorandum is to present:

- a. A brief history of the meetings of the O/SI Advisory Panel on Unidentified Flying Objects (Part I).
- b. An unofficial supplement to the official Panel Report to AD/SI showing North comments and suggestions of the Panel Members which they believed were inappropriate for inclusion in the formal report (Part II).

PART II: MEMORANDUM FOR THE RECORDGENERAL

After consideration of the subject of "Unidentified flying objects" at the 4 December meeting of the Intelligence Advisory Committee, the following action was agreed:

"The Director of Central Intelligence will:

- a. Enlist the services of selected scientists to review and appraise the available evidence in the light of pertinent scientific theories...."

Referring the detailed action of this action to the Assistant Director for Scientific Intelligence for preliminary investigation.

15 Feb 1953
Signal

[REDACTED]

an Advisory Panel of selected scientists was assembled. In cooperation with the Air Technical Intelligence Center, some histories of reported sightings and related material were made available for their study and consideration.

Present at the initial meeting (1000 Wednesday, 24 January) were: Dr. H. P. Robertson, Dr. John W. Johnson, Dr. Herbert Page, Dr. Samuel A. Goudin, Mr. William C. Strong, Lt. Col. Frederick G. G. Oiler (JNS Division), Mr. Harold P. Stevenson (JNS Division), and the writer. Donald Fisher, Dr. Lloyd V. Beebe, and [REDACTED] were absent until Friday afternoon. Messrs. Oiler and Stevenson were present throughout the meeting to familiarize themselves with the subject, represent the substantive interest of their Divisions, and assist in administrative support of the meetings. (A list of personnel concerned with the meetings is given in Tab A).

BACKGROUND

The AD/ST opened the meeting, reviewing STA interest in the subject and action taken. This review included the mention of the O/SI Study Group of August 1952 (Strong, Eng. and Ewart) culminating in the briefing of the JCS, the JNS December 21 briefing, A-1 center JNS compile phase, report to JNS (Chadwell, Robertson and Ewart), and O/SI concern over potential dangers to national security indirectly related to these sightings. Mr. Strong summarized these potential dangers following this introduction, Dr. Chadwell then [REDACTED] the meeting over to

Illegible Original**

THURSDAY AFTERNOON

The third and fourth meetings of the Panel were held Thursday, 15 January, commencing at 0900 with a two-hour break for luncheon. Besides Panel members and CIA personnel, Mr. Ruppolt and Dr. Hynok were present for both sessions. In the morning, Mr. Ruppolt continued his briefing on ATIG collection and analysis procedures. The Project STARK support at Battello Memorial Institute, Columbus, was described by Dr. Hynok. A number of case histories were discussed in detail and a motion picture film of ecagulla was shown. A two hour break for lunch was taken at 1200.

THURSDAY AFTERNOON

At 1400 hours Lt. Col. Oles gave a 40-minute briefing of Project TWINKLE, the investigatory project conducted by the Air Force Meteorological Research Center at Cambridge, Mass. In this briefing he pointed out the many problems of setting up and running 24-hour instrumentation watches of patrol centers searching for sightings of U.F.O.'s.

At 1615 Brig. Gen. William H. Garland joined the meeting with AD/BI. General Garland expressed his support of the Panel's efforts and stated three personal opinions:

- a. That greater use of Air Force intelligence officers in one field (for follow up investigation) was most desirable, but that they required thorough briefing.

Copied From Nearly
Illegible Original

- [REDACTED]
- b. That vigorous effort should be made to declassify as many of the reports as possible.
 - c. That some increase in the ATTC section devoted to U.F.O. analysis was indicated.

This meeting was adjourned at 1700.

FRIDAY MORNING

The fifth session of the Panel convened at 0900 with the same personnel present as enumerated for Thursday (with the exception of Brig. Gen. Garland).

From 0900 - 1000 there was general discussion and study of reference material. Also, Dr. Hynck read a prepared paper making certain observations and conclusions. At 1000 Mr. Fournet gave a briefing on his fifteen months experience in Washington as Project Office for U.F.O.'s and his personal conclusions. There was considerable discussion of individual case histories of sightings to which he referred. Following Mr. Fournet's presentation, a number of additional case histories were examined and discussed with Messrs. Fournet, Ruppelt, and Hynck. The meeting adjourned at 1200 for luncheon.

FRIDAY AFTERNOON

This session opened at 1400. Besides Panel members and CIA personnel, Dr. Hynck was present. Dr. Lloyd V. Berkner, an Panel Member, was present at this meeting for the first time. Progress of the meetings was reviewed by the Panel Chairman and tentative

[REDACTED]

-5-

by [REDACTED]
[REDACTED]

[REDACTED]

conclusions reached. A general discussion followed and tentative recommendations considered. It was agreed that the Chairman should draft a report of the Panel to AD/SI that morning for review by the Panel the next morning. The meeting adjourned at 1715.

SECOND MEETING

At 0945 the Chairman opened the second session and submitted a rough draft of the Panel Report to the members. This draft had been reviewed and approved earlier by Dr. Barker. The next two and one-half hours were consumed in discussion and revision of the draft. At 1100 the AD/SI joined the meeting and reported that he had shown and discussed a copy of the initial rough draft to the Director of Intelligence, USIA, whose reaction was favorable. At 1200 the meeting was adjourned.

THIRD MEETING

At 1400 the eighth and final meeting of the Panel was opened. Discussion and reviewing of certain sentences of the Report occupied the first hour. A copy of the final report is appended as Tab C. This was followed by a review of work accomplished by the Panel and statement of individual Panel members' opinions and suggestions on details that were felt inappropriate for inclusion in the final report. It was agreed that the writer would incorporate these comments in an interim report to the AD/SI. The remainder of the meeting was devoted to this task.

Illegible Original

PART IV: CONCLUSIONS AND RECOMMENDATIONS OF PANELGENERAL

The Panel Members were impressed (as have been others, including O/SI personnel) in the lack of sound data in the great majority of case histories; also, in the lack of speedy follow-up due primarily to the modest size and limited facilities of the AFIS section concerned. Among the case histories of significant sightings discussed in detail were the following:

Bellefontaine, Ohio (1 August 1952); Tremonton, Utah (2 July 1952); Great Falls, Montana (15 August 1950); Ench, Montana (1 September 1952); Washington, D. C. area (19 July 1952); and Haneda A.F.B., Japan (5 August 1952); Fort Warren, Michigan (29 July 1952); and Presque Isle, Maine (10 October 1952).

After review and discussion of these cases (and about 25 others, in less detail), the Panel concluded that reasonable explanations could be suggested for most sightings and "by deduction and scientific method it could be induced (given additional data) that other cases might be explained in a similar manner". The Panel pointed out that because of the brevity of some sightings (e.g. 2-3 seconds) and the inability of the witnesses to express themselves clearly (quantities) that conclusive explanations could not be expected for every case reported. Furthermore, it was considered that, normally, it would be a great waste of effort to try to solve most of the sightings, unless such action would benefit a training and educational program (see below). The writings of Charles Fort were referenced to show

CONFIDENTIAL
Illegible Original

[REDACTED]

that "strange things in the sky" had been recorded for hundreds of years. It appeared obvious that there was no single explanation for a majority of the things seen. The presence of radar and astronomical specialists on the Panel proved of value at once in their confident recognition of phenomena related to their fields. It was apparent that specialists in such additional fields as psychology, meteorology, aerodynamics, cranthology and military air operations would extend the ability of the Panel to recognize many more categories of little-known phenomena.

ON LACK OF DANGER

The Panel concluded unanimously that there was no evidence of a direct threat to national security in the objects sighted. Instances of "Foo Fighters" were cited. These were unexplained phenomena sighted by aircraft pilots during World War II in both European and Far East theaters of operation wherein "balls of light" would fly near or with the aircraft and maneuver rapidly. They were believed to be electrostatic (similar to St. Elmo's fire) or electromagnetic phenomena or possibly light reflections from ice crystals in the air, but their exact cause or nature was never defined. Prof. Robertson and Alvarez had been concerned in the investigation of these phenomena, but David T. Geiger (Professor of Geophysics at the University of California at Los Angeles) is believed to have been the most knowledgeable person on this subject. If the term "flying saucers" had been popular in 1943 - 1945, these objects would

[REDACTED]

[REDACTED]

have been so labeled. It was interesting that in at least two cases reviewed that the object sighted was categorized by Robertson and Alvarez as probably "Foo Fighters", to date unexplained but not dangerous; they were not happy then to dismiss the sightings by calling them noise. It was their feeling that these phenomena are not beyond the domain of present knowledge of physical sciences, however.

AIR FORCE REACTION TO SEEN

It was the Panel's opinion that some of the Air Force concern over U.F.O.'s (notwithstanding Air Defence Command anxiety over fast radar tracks) was probably caused by public pressure. The result today is that the Air Force has instituted a fine channel for receiving reports of nearly anything anyone sees in the sky and fails to understand. This has been particularly encouraged in popular articles on this and other subjects, such as space travel and science fiction. The result is the mass receipt of low-grade reports which tend to overload channels of communication with material quite irrelevant to hostile objects that might some day appear. The Panel agreed generally that this mass of poor-quality reports containing little, if any, scientific data was of no value. Quite the opposite, it was possibly dangerous in having a military service foster public concern in "nocturnal wandering lights". The implication being, since the interested agency was military, that these objects were or might be potential direct threats to national security. Accordingly, the need for declassification made itself apparent. Comments on a possible educational program are enumerated below.

[REDACTED]

-2-

Copied From Nearly
Illegible Original

[REDACTED]

It was the opinion of Dr. Robertson that the "saucer" problem had been found to be different in nature from the detection and investigation of German V-1 and V-2 guided missiles prior to their operational use in World War II. In this 1943-1944 intelligence operation (CROSSECH), there was excellent intelligence and by June 1944 there was material evidence of the existence of "hardware" obtained from crashed vehicles in Sweden. This evidence gave the investigating team a basis upon which to operate. The absence of any "hardware" resulting from unexplained U.F.O. sightings lends a "will-of-the-wisp" nature to the AGIC problem. The results of their investigation, to date, strongly indicate that no evidence of hostile act or danger exists. Furthermore, the current reporting system would have little value in the case of detection of enemy attack by conventional aircraft or guided missiles; under such conditions "hardware" would be available almost at once.

REMARKS OF MR. FOURNET

It was interesting to note that none of the members of the Panel were loath to accept that this earth might be visited by extra-terrestrial intelligent beings of some sort, some day. What they did not find was any evidence that related the objects sighted to space travelers. Mr. Fournet, in his presentation, showed how he had eliminated each of the known and probable causes of sightings leaving him "extra-terrestrial" as the only one remaining in any case. Fournet's background as an aeronautical engineer and technical intelligence

[REDACTED]

officer (Project Officer, BLUEBOOK for 15 months) could not be sighted. However, the Panel could not accept any of the cases sighted by him because they were raw, unvaluated reports.

Terrestrial explanations of the sightings were suggested in some cases and in others the time of sighting was so short as to cause suspicion of visual impressions. It was noted by Dr. Goudanitz and others that extraterrestrial artifacts, if they did exist, are no cause for alarm; rather, they are in the realm of natural phenomena subject to scientific study, just as cosmic rays were at the time of their discovery 20 to 30 years ago. This was an attitude in which Dr. Robertson did not concur, as he felt that such artifacts would be of immediate and great concern not only to the U. S. but to all countries. (Nothing like a common threat to unite peoples!) Dr. Page noted that present astronomical knowledge of the solar system makes the existence of intelligent beings (as we know the term) elsewhere than on the earth extremely unlikely, and the concentration of their attention by any controllable means confined to any one continent of the earth quite preposterous.

ATOMIC BOMB, USARL, SIGHTING

This case was considered significant because of the excellent documentary evidence in the form of Kodachrome motion picture films (about 1600 frames). The Panel studied these films, the case history, ATIC's interpretation, and received a briefing by representatives of the USN Photo Interpretation Laboratory on their analysis of the film. This team had expended (at Air Force request, approximately

[REDACTED]

all.

Copied From Nearly
Illegible Original

[REDACTED]
[REDACTED]

1000 man-hours of professional and sub-professional time in the preparation of graph plots of individual frames of the film, showing apparent and relative motion of objects and variation in their light intensity. It was the opinion of the P.I.L. representatives that the objects sighted were not birds, balloons or aircraft, were "not reflections because there was no blinking while passing through 60° of arc" and were, therefore, "self-luminous". Plots of motion and variation in light intensity of the objects were displayed. While the Panel Members were impressed by the evident enthusiasm, industry and extent of effort of the P.I.L. team, they could not accept the conclusions reached. Some of the reasons for this were as follows:

- a. A semi-spherical object can readily produce a reflection of sunlight without "blinking" through 60° of arc travel.
- b. Although no data was available on the "behavior" of birds or polyethylene balloons in bright sunlight, the apparent motions, sizes and brightnesses of the objects were considered strongly to suggest birds, particularly after the Panel viewed a short film showing high reflectivity of seagulls in bright sunlight.
- c. P.I.L. description of the objects sighted as "irregular, bluish-white" in color would be expected in cases of specular reflections of sunlight from convex surfaces where the brilliancy of the reflections would obscure other portions of the object.

[REDACTED]
[REDACTED]

-12-

Copied From Healy
Meggie Original

- [REDACTED]
- d. Objects in the Great Falls case were believed to have probably been aircraft, and the bright lights such reflections.
 - e. There was no valid reason for the attempt to relate the objects in the Tremonton sighting to those in the Great Falls sighting. This may have been due to misunderstanding in their directive. The objects in the Great Falls sighting are strongly suspected of being reflections of aircraft known to have been in the area.
 - f. The intensity change in the Tremonton lights was too great for acceptance of the P.I.L. hypothesis that the apparent motion and changing intensity of the lights indicated extremely high speed in small orbital paths.
 - g. Apparent lack of guidance of investigators by their familiarity with U.F.O. reports and explanations.
 - h. Analysis of light intensity of objects made from duplicate rather than original film. The original film was noted to have a much lighter background (affecting relative brightness of object) and the objects appeared much less bright.
 - i. Method of obtaining data of light intensity appeared faulty because of unreliability of equipment and questionable assumptions in making averages of readings.
 - j. No data had been obtained on the sensitivity of Kodachrome film to light of various intensities using the same camera type at the same lens openings.
- [REDACTED]
- 1-

Copied From Nearly
Illegible Original

[REDACTED]

k. Hand "fitter" frequencies (obtainable from early part of
Tremont film) were not removed from the plots of the
"single pass plots" at the end of the film.

The Panel believed strongly that the data available on this
sighting was sufficient for positive identification if further data
is obtained by photographing polystyrene "pillars" balloons released
near the site under similar weather conditions; checking bird flight
and reflection characteristics with competent ornithologists and
calculating apparent "G" forces acting upon objects from their apparent
tracks. It was concluded that the results of such tests would prob-
ably lead to creditable explanations of value in an educational or
training program. However, the Panel noted that the cost in material
manpower effort required to follow up and report on every one of the
thousand or more reports received through channels each year (1,500 in
1952) could not be justified. It was felt that there will always be
sightings, for which complete data is lacking, that can only be
explained with disproportionate effort and with a long time delay, if
at all. This long delay in explaining a sighting tends to eliminate
any intelligence value. The educational or training program should
have as a major purpose the dissemination of popular feeling that every
sighting, no matter how poor the data, must be explained in detail.
Attention should be directed to the requirement among scientists that
a new phenomenon, so far as possible, must be completely and continuously
documented. In other words, the burden of proof is on the sighter,
not the explainer.

Why?

[REDACTED]

Copied From Nearly
Illegible Original

POTENTIAL RELATED DANGERS

The Panel Members were in agreement with O/SI opinion that, although evidence of any direct threat from these sightings was wholly lacking, related dangers might well exist resulting from:

- a. Misidentification of actual enemy artifacts by defense personnel.
- b. Overloading of emergency reporting channels with "false" information ("noise to signal ratio" analogy--barkner).
- c. Subjectivity of public to mass hysteria and greater vulnerability to possible enemy psychological warfare.

Although not the concern of CIA, the first two of these problems may seriously affect the Air Defense intelligence system, can be studied by experts, possibly under ADJ. If U.S. is benevolently credited in a reaction to the "flying saucer" craze, or if reporting channels are saturated with false and poorly documented reports, our capability of detecting hostile activity will be reduced.

Dr. Page noted that more scrupulous screening or filtering of reported sightings of certain the source is required, and that this can best be accomplished by an educational program.

GEOPHYSICAL LOCATION OF UNEXPLAINED SIGHTINGS

The map prepared by AFSS showing geographic location of officially reported unexplained sightings (1952 only) was examined by the Panel. This map showed clusters in certain strategic areas such as Los Angeles. This might be explained on the basis of 24-hour watchful guard and

[REDACTED]

awareness of security measures near such locations. On the other hand, there had been no sightings in the vicinity of sensitive related AE establishments while there were occasionally multiple cases of unexplained sightings in non-strategic areas. Furthermore, there appeared to be no logical relationship to population centers. The Panel could find no ready explanation for these clusters. It was noted, however, that if terrestrial artifacts were to be observed it would be likely that they would be seen first near foreign areas rather than central U. S.

DISSEMINATION TO OFFICIAL DATA

The Panel was of the opinion that the present ATIC program to place 100 inexpensive 35 mm. stereo cameras in the hands of various airport control tower operators would probably produce little valuable data related to UFO's. However, it was recognized that such action would tend to allay public concern in the subject until an educational program had taken effect. It was believed that procurement of these cameras was partly the result of public pressure in July 1952. With the poor results of the year-long Project TWINKLE program of 24-hour instrumentation watch (two frames of film showing nothing distinguishable), a widespread program of sky-watching would not be expected to yield much direct data of value.

There was considerable discussion of a possible "sky patrol" by amateur astronomers (Hynek) and by wide-angle cameras (Rago). Dr. Rago and Dr. Robertson pointed out that at present a considerable fraction

[REDACTED]

~~SECRET~~

of the sky is now--and has been for many years--under surveillance every clear night in several meteor and camera observing programs as well as sky mapping programs at the various locations listed below.

Although the attention of these astronomers is largely directed toward identified rather than unidentified objects, no case of any striking unidentified object is known to Dr. Page or Dr. Synak. Such an object would most certainly be reported if found on patrol plates.

A case was cited where an astronomer refused to interrupt his exposure in order to photograph an alleged sighting in a different part of the sky. This led Dr. Synak to say that, if a program of watching could be an adjunct of planned astronomical programs, little cost would be involved and that the trained astronomical personnel might photograph a sighting of an unidentified object.

The location of some of these programs and their directors are believed to be:

- a. Harvard University, Cambridge and New Mexico (meteor patrol)--Whipple.
- b. Yerkes Observatory, University of Chicago and Fort Davis, Texas (several programs)--Melnot (aurorae), Kuiper (asteroids), Morgan (wide angle camera).
- c. University of Alaska, Fairbanks (aurorae)--Ilvrey.
- d. Dominion Observatory, Ottawa (meteors)--McLellan.
- e. Palomar Observatory, California (sky map)--Hinkowski.
- f. Lick Observatory, California (sky map)--Shomo.

[REDACTED]

It was agreed by the Panel that no government-sponsored program of optical nation-wide sky patrol is worthwhile at the present time, and that the encouragement of amateur astronomers to undertake such a program might have the adverse effect of over-emphasizing "flying saucer" stories in the public mind. However, the issue of radar "scope" cameras for recording peculiar radar echoes would serve several purposes, including the better understanding of radar interference as well as identification of U.F.O.'s.

RADAR PROBLEM OF MUTUAL INTERFERENCE

This characteristic problem of radar operation wherein the pulse signal (of approximately the same frequency) from station A may be picked up on the screen of station B and show as a high-speed track or series of dots was recognized to have probably caused a number of U.F.O. reports. This problem was underlined by information received indicating ADC concern in solving this problem of signal identification before service use of very high-speed aircraft or guided missiles (1955-1956). Dr. Forrester believed that one answer to this problem was the use of a "doppler filter" in the receiving circuit. Dr. Alvarez suggested that the problem might be better solved by the use of a "controlled jitter" wherein the operator receiving "very fast tracks" (on the order of 1000-10,000 m.p.h.) would operate a circuit which would alter slightly his station's pulse frequency rate. If the signal received on the screen had been caused by mutual interference with another station, the track would now show itself at a different distance

[REDACTED]

from the center of the screen, if it still appeared at all. Dr. Alvarez felt such a technical solution was simpler and would cost much less than a "doppler filter".

INTERPRETATION OF THE DATA

The reported cases were examined: one at Falconer Mountain, California, in October 1949, when cosmic ray counters went "off scale for a few seconds", apparently while a "V" of flying saucers was observed visually; and two, a series of observations by the "Los Alamos Bird Watchers Association" from August 1950 to January 1951, when cosmic ray coincidence counters behaved queerly. Circuit diagrams and records were available for the latter, and Dr. Alvarez was able quickly to point out that the recorded data were undoubtedly due to instrumental effects that would have been recognized as such by more experienced observers.

The conclusion that radioactive effects were correlated with unidentified flying objects in these two cases was, therefore, rejected by the Panel.

OPERATIONAL PROGRAM

The Panel's concept of a broad educational program integrating efforts of all concerned agencies was that it should have two major aims: training and "documenting".

The training aim would result in proper recognition of unusually illuminated objects (e.g., balloons, aircraft reflections) as well as natural phenomena (e.g., stars, fireballs, mirages, noctilucent clouds).

Both visual and radar recognition are concerned. There would be many

Copied From Nearly
Illegible Original

[REDACTED]

levels in such education from enlisted personnel to command and research personnel. Relative emphasis and degree of explanation of different programs would correspond to the categories of duty (e.g., radar operators; pilots; control tower operators; Ground Observer Corps personnel; and officers and enlisted men in other categories). This training should result in a marked reduction in reports caused by misidentification and resultant confusion.

The "defining" aim would result in reduction in public interest in "flying saucers" which today evokes a strong psychological reaction. This education could be accomplished by radio, such as television, motion pictures, and popular magazines. Basis of such education would be actual case histories which had been publicized at first but later explained. As in the case of conjuring tricks, there is much less stimulation if the "secret" is known. Such a program should tend to reduce the current gullibility of the public and consequently their susceptibility to clever hoaxing propaganda. The Panel noted that the general absence of Russian propaganda based on a subject with so many obvious possibilities for exploitation might indicate a possible Russian official policy.

Members of the Panel had various suggestions related to the planning of such an educational program. It was felt strongly that psychologists familiar with mass psychology should advise on the nature and extent of the program. In this connection, Dr. William G. Sumner (Director of the Laboratory of Social Psychology, Harvard University) was suggested as a possible official "Threaten to a"

[REDACTED]

Copied From Nearly
Illegible Original

[REDACTED]

Mars", (a study in the psychology of panic, written about the famous
Oroon Hallow radio broadcast in 1938) and has since performed advanced
laboratory studies in the field of perception. The names of Don Marquis
(University of Michigan) and Leo Rosten were mentioned as possibly
suitable as consultant psychologists. Also, someone familiar with
mass communication techniques, perhaps an advertising expert, would be
helpful. Arthur Coffey was mentioned as possibly a valuable channel
of communication reaching a mass audience of certain levels. Dr. Buriner
suggested the U. S. Navy (ONI) Special Devices Center, San Diego, L. I.,
as a potentially valuable organization to assist in such an educational
program. The teaching techniques used by this agency for aircraft
identification during the past war was cited as an example of a similar
educational task. The Jan Brady Co. which made World War II training
films (motion picture and slide strips) was also suggested, as well as
Walt Disney, Inc. animated cartoons. Dr. Kynsk suggested that the
amateur astronomers in the U. S. might be a potential source of enthusi-
astic talent to spread the gospel. It was believed that business
clubs, high schools, colleges, and television stations would all be
planned to cooperate in the showing of documentary type motion pictures
if prepared in an interesting manner. The use of two cases showing
first the "mythology" and then the "exploration" would be forceful.

To plan and execute such a program, the Panel believed was no
main task. The current investigatory group at ATIS would, of necessity,
have to be closely integrated for support with respect to not only the

[REDACTED]

would be the photographing of "pillow balloons" at different distances under similar weather conditions at the site.

The help of one or two psychologists and writers and a subcontractor to produce training films would be necessary in addition. The Panel considered that AFIC's efforts, temporarily expanded as necessary, could be most useful in implementing any action taken as a result of its recommendations. Experience and records of AFIC would be of value in both the public educational and service training program envisioned. Dr. Robertson at least was of the opinion that after public guilt has lessened and the service organizations, such as AFIC, had been trained to sift out the more readily explained symptoms and signs, there would still be a need for a very modest-sized AFIC section to cope with the residue of cases of possible scientific intelligence value. This section would concentrate on systematically following up (perhaps on the advice of qualified Air Force Scientific Advisory Board members) those cases which seemed to indicate the evidence of unconventional entry artifacts. Surveys of such artifacts could be expected to arise mainly from human sources in far shorter proximity to the Iran-Castro than Soviet, Thai

100-443887-2693

The Panel took cognizance of the existence of such groups as
 registered Black Nationalist Movement (B.N.M.) and the National
Black Labor Union (N.B.L.) and the National
Black Labor Union (N.B.L.) and the National
 such organizations are not subject to the same potentiality

Copied From Nearly
Illegible Original

[REDACTED]

great influence on mass thinking if widespread sightings should occur.

The apparent irresponsibility and the possible use of such groups for subversive purposes should be kept in mind.

DECREASE IN NUMBER OF SIGHTINGS

The consensus of the Panel was, based upon the history of the subject, that the number of sightings could be reasonably expected to increase again this summer.

REPORT OF THE SCIENTIFIC PANEL
ON
UNIDENTIFIED FLYING OBJECTS

JAN 17 1959

1. Pursuant to the request of the Assistant Director for Scientific Intelligence, the undersigned Panel of Scientific Consultants has met to evaluate any possible threat to national security posed by Unidentified Flying Objects ("Flying Saucers"), and to make recommendations thereon. The Panel has received the evidence as presented by cognizant intelligence agencies, primarily the Air Technical Intelligence Center, and has reviewed a selection of the best documented incidents.

2. As a result of its considerations, the Panel concludes

a. That the evidence presented on Unidentified Flying Objects shows no indication that these phenomena constitute a direct physical threat to national security.

We firmly believe that there is no reason to fear that these phenomena which are attributable to foreign artifacts capable of hostile acts, and that there is no evidence that the phenomena indicate a threat for the revision of our current intelligence concepts.

3. The Panel further concludes

a. That the continued emphasis on the report of these phenomena does, in the long run, result in a threat to the orderly functioning of the protective organs of the body politic.

We cite as examples the clogging of the channels of communication by false reports, the danger of being led by continued false alarms to ignore real

Copied From Nearly
Illegible Original

indications of hostile action, and the cultivation of a morbid national psychology in which skillful hostile propaganda could induce hysterical behavior and harmful distrust of duly constituted authority.

4. In order most effectively to strengthen the national facilities for the timely recognition and the appropriate handling of true indications of hostile action, and to minimize the confusion and error attendant upon the above, the Panel recommends:

a. That the national security agencies take immediate steps to strip the Unidentified Flying Objects of the special status they have been given and the aura of mystery they have so successfully acquired;

b. That the national security agencies take immediate steps to improve intelligence, training, and public information designed to prepare the national defenses and the people of the country to recognize most promptly and to react most effectively to the indications of hostile intent or action.

We suggest that these aims may be achieved by an integrated program designed to reassure the public of the soundness of available information, to provide for the prompt recognition of hostile action, to train the public to recognize false indications quickly and effectively, and to strengthen national defenses against the threat of hostile action.

(c) The Panel recommends that the national security agencies take immediate steps to improve intelligence, training, and public information designed to prepare the national defenses and the people of the country to recognize most promptly and to react most effectively to the indications of hostile intent or action.

(d) The Panel recommends that the national security agencies take immediate steps to improve intelligence, training, and public information designed to prepare the national defenses and the people of the country to recognize most promptly and to react most effectively to the indications of hostile intent or action.

SCIENTIFIC ADVISORY PANEL ON
UNIDENTIFIED FLYING OBJECTS

14 - 17 January 1953

EVIDENCE PRESENTED

1. Seventy-five case histories of sightings 1951 - 1952 (collected by ATIC as those best documented).
 2. ATIC Status and Progress Reports of Project GRUDGE and Project BLUE BOOK (code names for ATIC study of subject).
 3. Progress Reports of Project STORM (code name for Randolf Memorial Institute contract work supporting ATIC).
 4. Summary Report of Sightings at Holloman Air Force Base, New Mexico.
 5. Report of USAF Research Center, Cambridge, Mass., Investigation of "Green Fireball" Phenomena (Project TWINKLE).
 6. Outline of Investigation of U.F.O.'s Proposed by Kirtland Air Force Base (Project FORCE).
 7. Motion Picture Films of sightings at Tremonton, Utah, 2 July 1951 and Great Falls, Montana, August 1950.
 8. Summary Report of 89 selected cases of sightings of various categories (Formations, Blinking Lights, Hovering, etc).
 9. Draft of manual: "How to Make a FLIOBREP", prepared at ATIC
 10. Chart Showing Plot of Geographic Location of Unexplained Sightings in the United States during 1952.
 11. Chart Showing Balloon Launching Sites in the United States
 12. Charts Showing Selected Actual Balloon Flight Paths and Solars to Reported Sightings
 13. Charts Showing Frequency of Reports of Sightings, 1941 - 1952
 14. Charts Showing Categories of Explanations of Sightings
 15. Kodachrome Transparencies of Polyethylene Film Balloons with Sunlight Causing High Reflectivity
- [REDACTED]

- [REDACTED]
16. Motion pictures of balloons in flight.
 17. Intelligence Reports Relating to U.S.S.R. Interest in J. S. Balloons.
 18. Samples of Official USAF Reporting Forms and Copies of Reports of Air Force, Army and Navy Orders Relating to Subject.
 19. Sample Polyethylene "Pillow" Balloon (54 inches square).
 20. "Variations in Radar Coverage", JAMP 111 (Manual illustrating the operating characteristics of Service radar).
 21. Miscellaneous official letters and foreign intelligence reports dealing with subject.
 22. Copies of popular published works dealing with subject (articles in periodicals, newspaper clippings and books).

Figure 1

Figure 1 shows two panels illustrating the relationship between the number of children and the probability of having a child.

The top panel displays the estimated probability of having a child (Y-axis) against the number of children (X-axis). The curve starts at approximately 0.8 for 0 children, drops sharply to about 0.6 for 1 child, and then rises slightly to around 0.7 for 2 children.

The bottom panel displays the estimated probability of having a child (Y-axis) against the number of children (X-axis). The curve starts at approximately 0.8 for 0 children, drops sharply to about 0.6 for 1 child, and then rises slightly to around 0.7 for 2 children.
